2. DUMMY.CRASHTEST.KONFERENZ

APPLICATION OF THE PRIMUS BREAKABLE® BIOFIDELIC DUMMY IN IMPETUS®

AGENDA

2. DUMMY.CRASHTEST.KONFERENZ

1. Introduction in armoured vehicle development

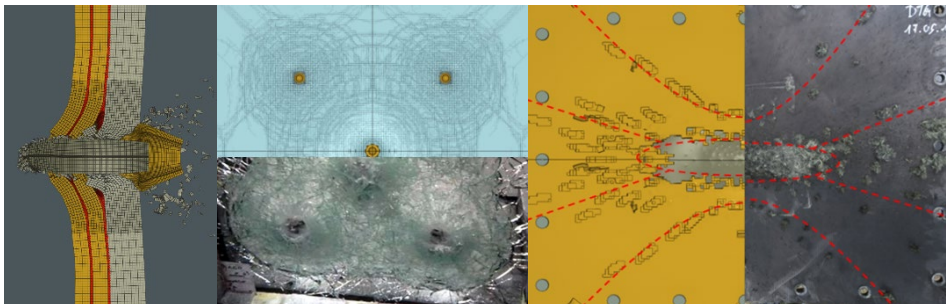

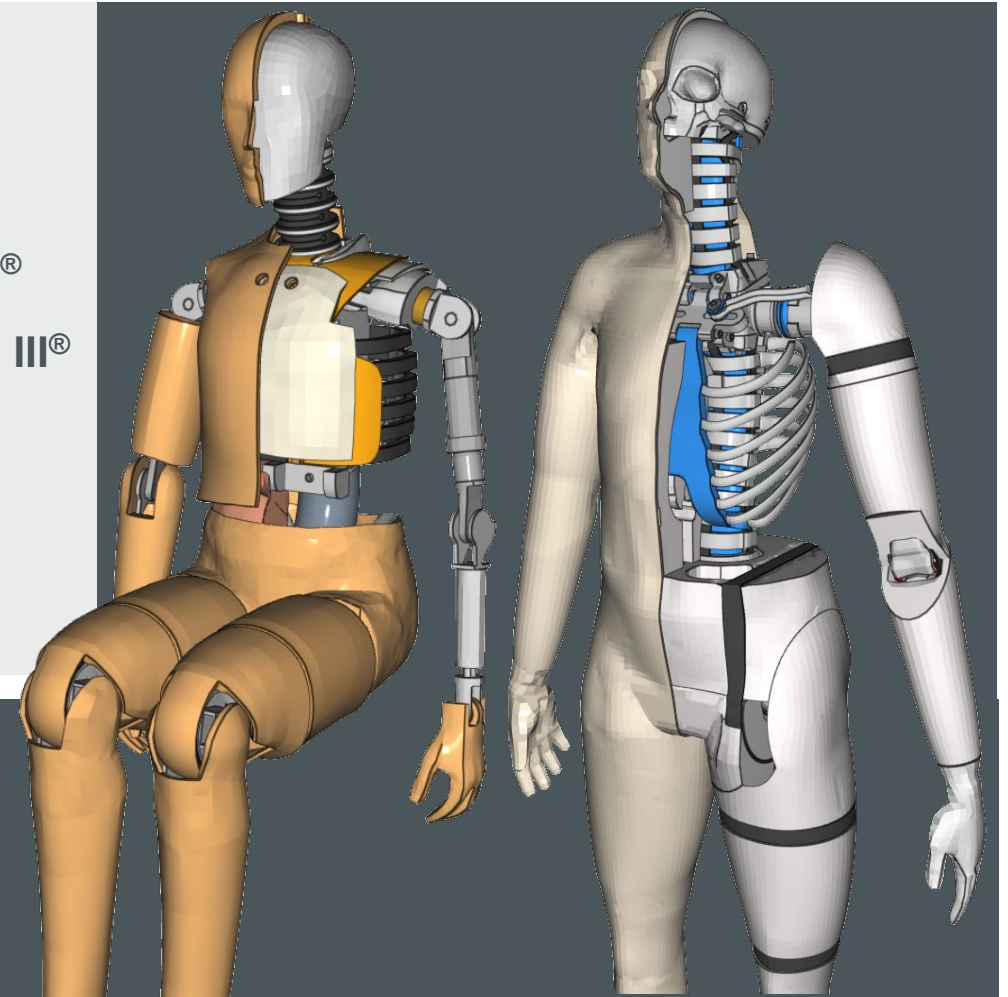

- a. Development process and occurring injury mechanisms
- b. Certification approach according to VPAM ERV Ed. 3 and STANAG 4569

2. Development of the PRIMUS Breakable® model for IMPETUS®

3. Use case comparison of the PRIMUS Breakable® and Hybrid III®

- a. Vertical loading condition after a mine detonation underneath a structure
- b. Secondary projectile impact after an IED detonation
- c. Forensic reconstruction of an accident with a „Panzerfaust 3“ at the WTD 91

4. Conclusion

DEVELOPMENT OF ARMOURED VEHICLES

OBJECTIVE AND INJURY

Protection of human life

Civil: Withstand the attack and initiate the escape!

Military: Take countermeasures and fulfill the mission!

Damages / Injuries

Primary injuries Shockwaves

- **Traumatic amputation**, large deformation of soft tissue
- **Splinter fractures** due to the explosiveness of the explosive
- **Injuries to air-filled organs** (lungs, abdomen)
- **Eardrum injuries**

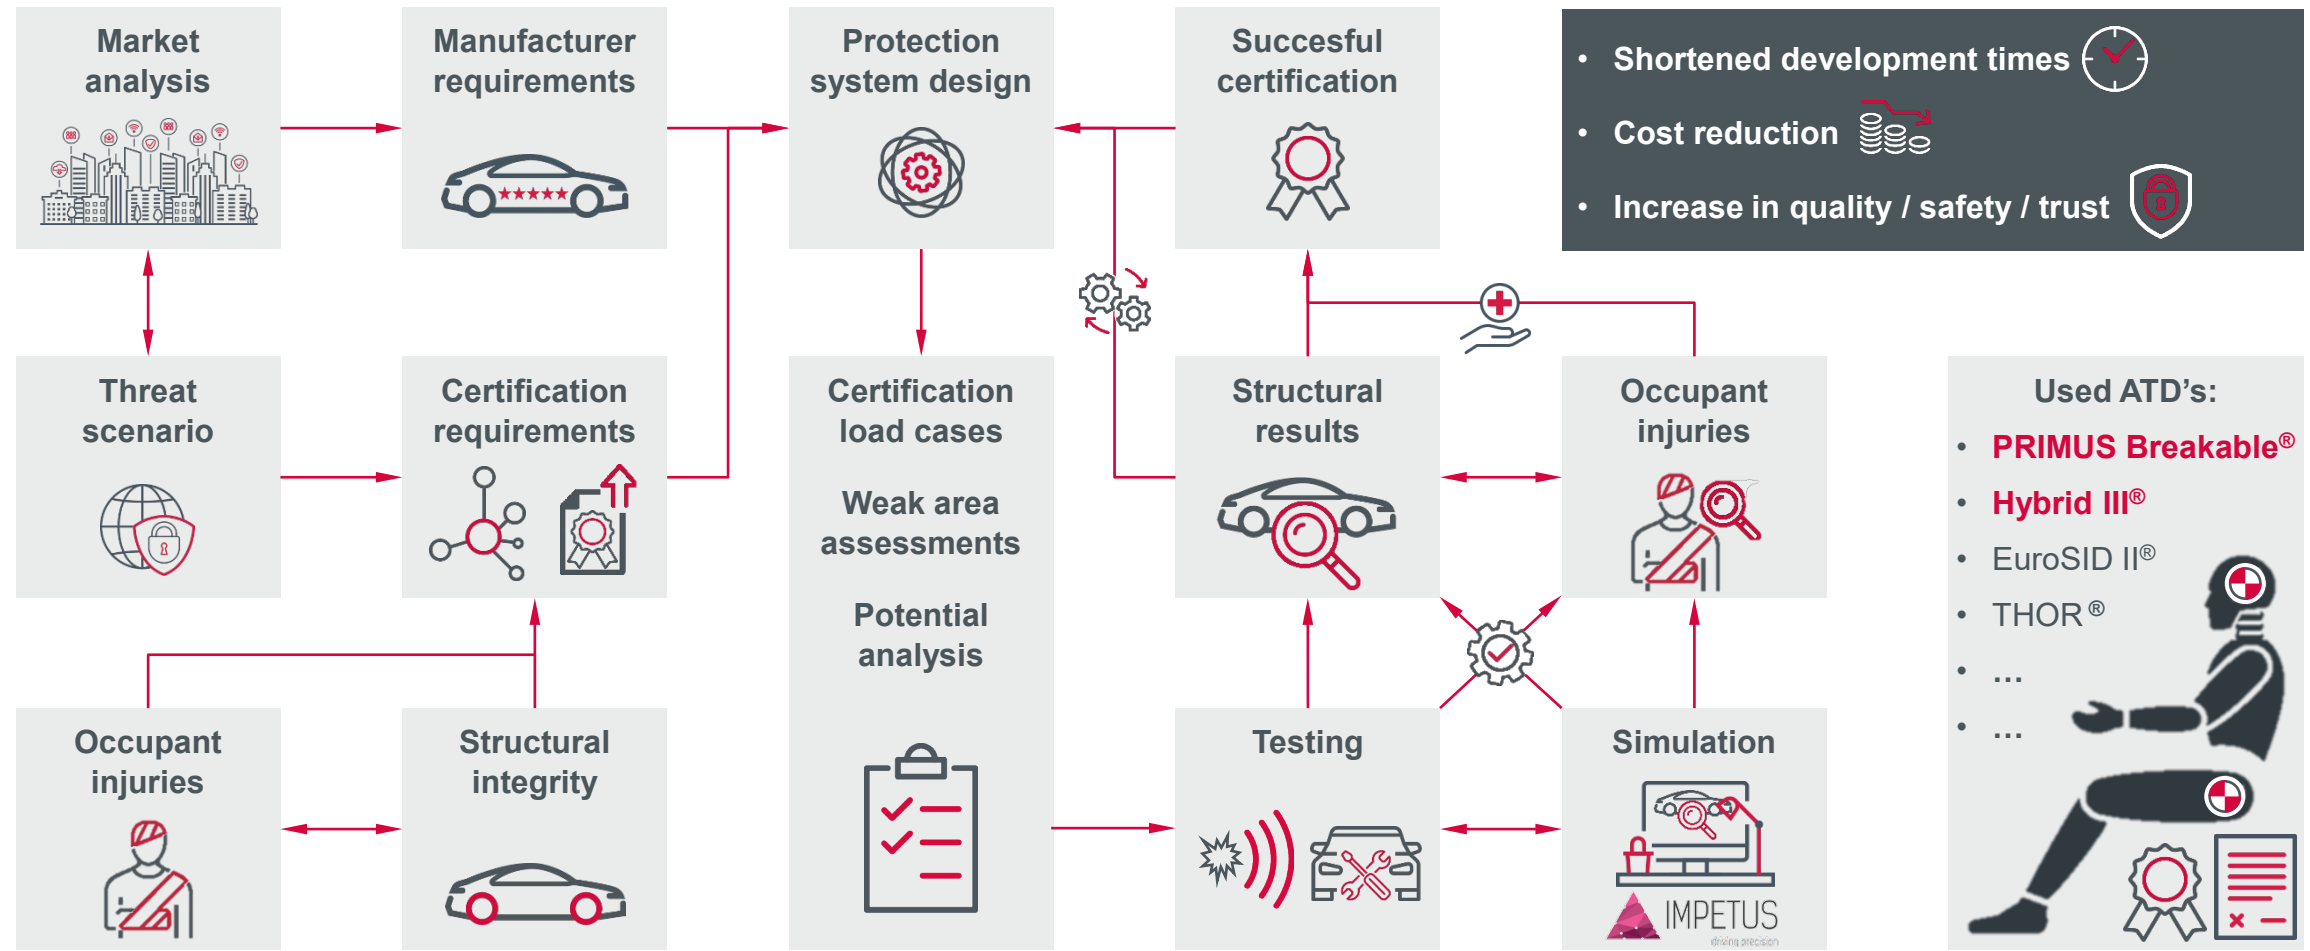

Secondary injuries Fragments

- **Penetrating wounds**, which occur mainly on the lower extremities and the face
- **Splinter fractures on the extremities** due to the impact of fragments

Tertiary injuries Accelerations

- **Injuries to the lower extremities** by vertical loading
- **Thigh injuries or femoral fracture** by hitting other parts
- **Blunt injuries** by contact with the vehicle structure
- **Fractures of the extremities and skull** through contact with the vehicle structure

<https://www.vpam.eu/pruefrichtlinien/aktuell/erv-2010/>

Comparison

Surviveability	Permissible Injuries	Combat ability
Biofidelic behavior	Design of the dummy	Fatigue strength
Flexible	Application	Restricted to load case
Mostly representable	Relevant injuries	Conditionally representable
Detailed autopsy	Evaluation	Discrete measurements
~ 26.000€ (refurbishable)	Buying costs per Dummy	> 250.000€ (multi time use)
Biofidelity: The imaging quality of a model regarding the simulation of a biological system e.g., the human

PRIMUS BREAKABLE® IN IMPETUS AFEA SOLVER®

<https://www.crashtest-service.com/de/biofidel-dummy-/modelluebersicht/primus-breakable/>

NUMERICAL SOLVER IMPETUS AFEA SOLVER®

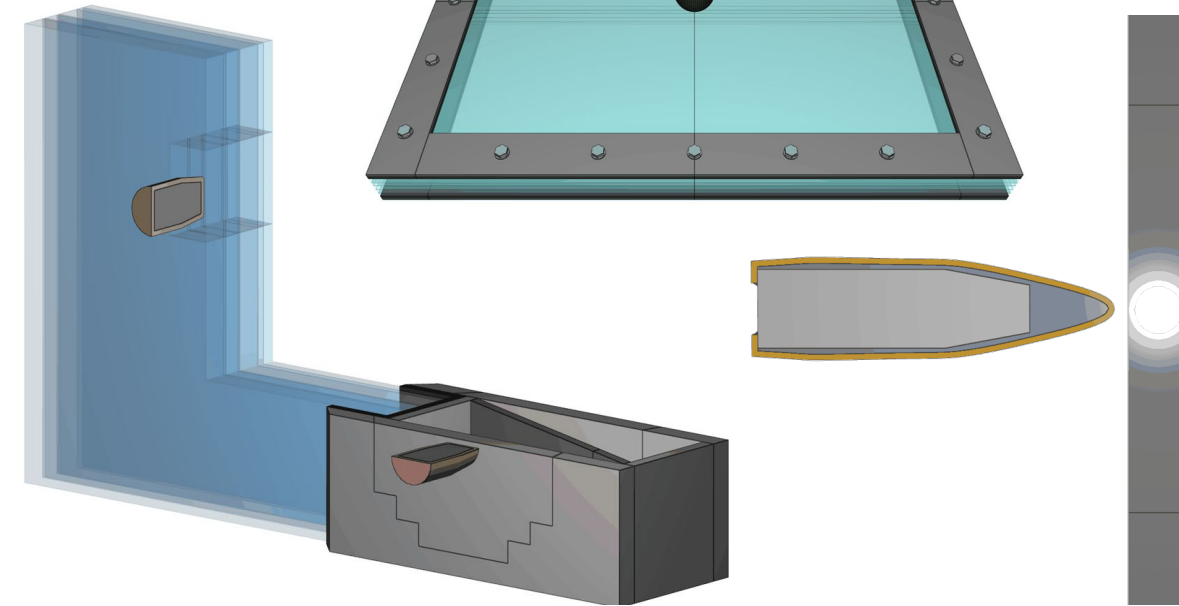

General fields of application:

- **Large deformations and high degrees of deformation**
 - Extreme speeds (explicit solver)
 - Particle conversion
- **Material behavior under extreme loading conditions**
 - Variety of detailed material and failure models
 - Node splitting algorithm to represent cracking
- **Structural interaction of pressure waves**
 - Discrete particle method DP (gases and granules)
 - Smoothed particle hydrodynamics SPH (liquids)

Simulation as a Development-Tool:

- **Understanding of the causal relationships**
 - Optimizations and structural improvements
- **Virtual evaluation of certification load cases**
 - Possibility to save several prototypes in the long term

MODELING OF THE PRIMUS BREAKABLE® SURROGATE MATERIALS

Surrogate Materials

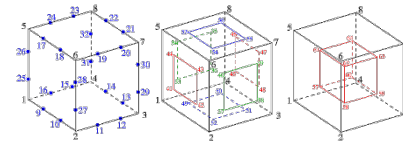

- Validation of the material models based on material tests

Fitting of the stress-strain curves under realistic damage behavior!

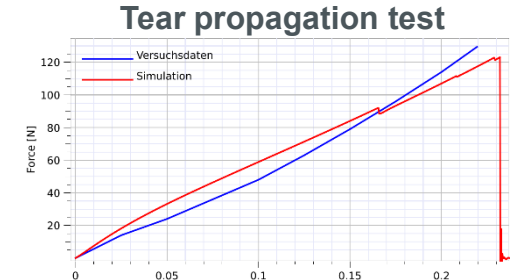

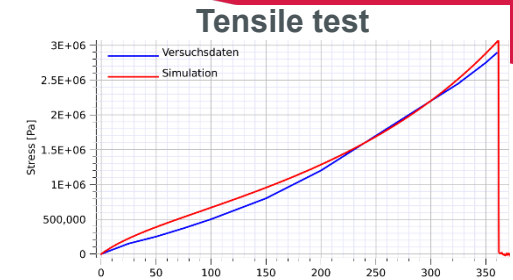

Further Materials

- Skin surrogate and elastic-band
- Wire-cable and steel screws

Soft-tissue surrogate

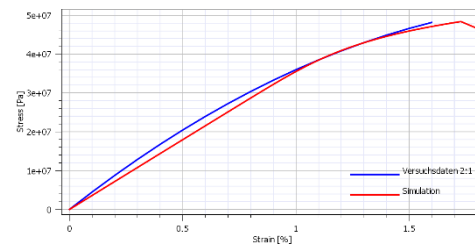

Ø 8,0 – 10,0mm
cubic

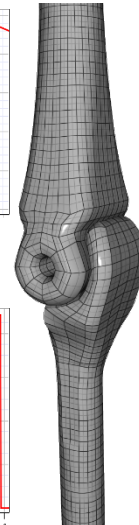

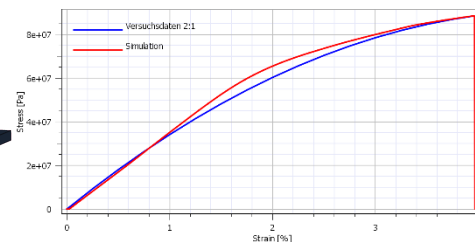

Bone surrogate

Tensile test

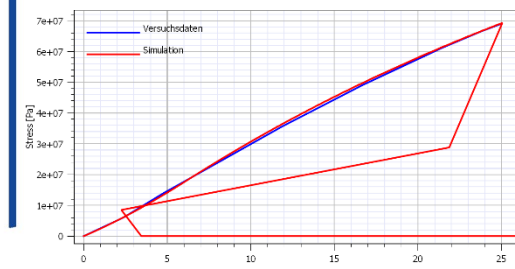

Bending test

Ligament surrogate

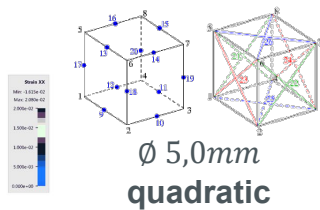

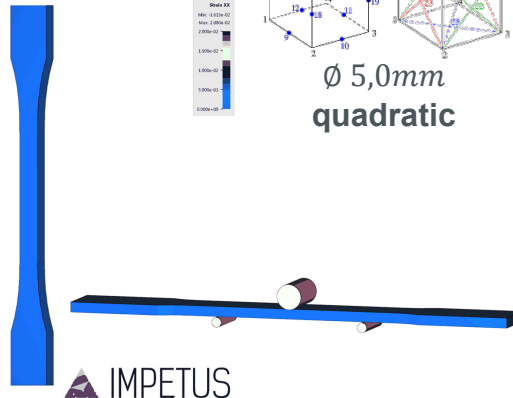

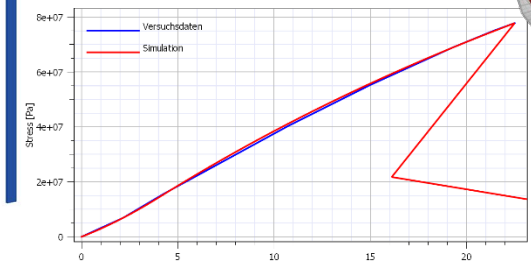

Tensile test

Ø 5,0 – 10,0mm
quadratic

Tensile test

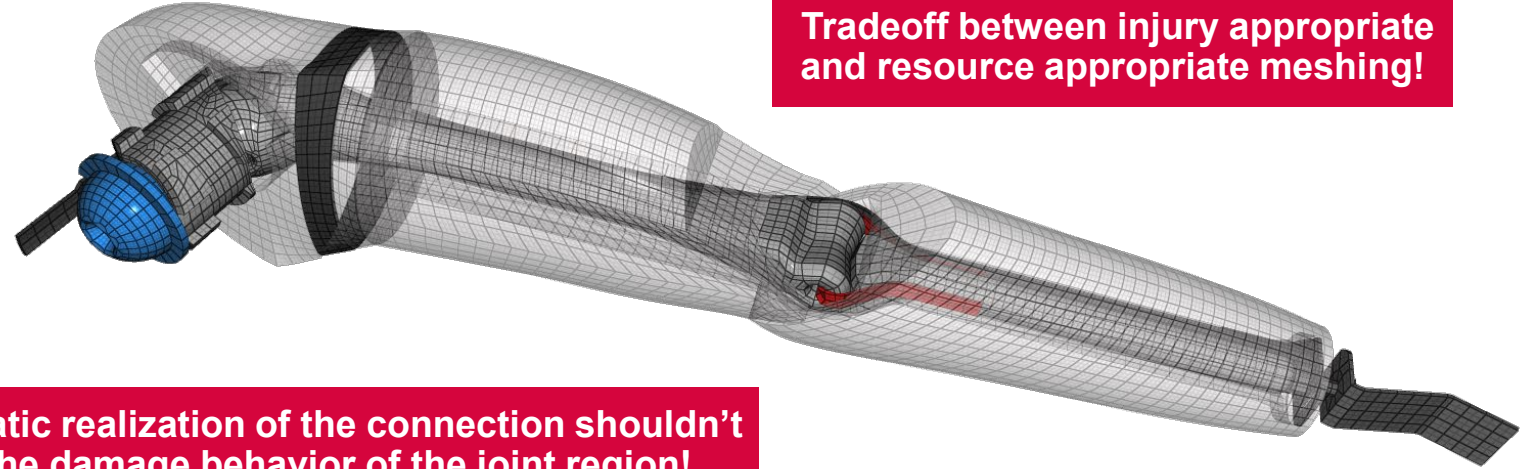

Ø 5,0mm
quadratic

MODELING OF THE PRIMUS BREAKABLE® MESHING AND CONNECTION TECHNIQUES

Meshing

- Visualisation of fractures, penetrating injuries and torn ligaments
- vs.
- GPU memory, number of elements and polynomial order

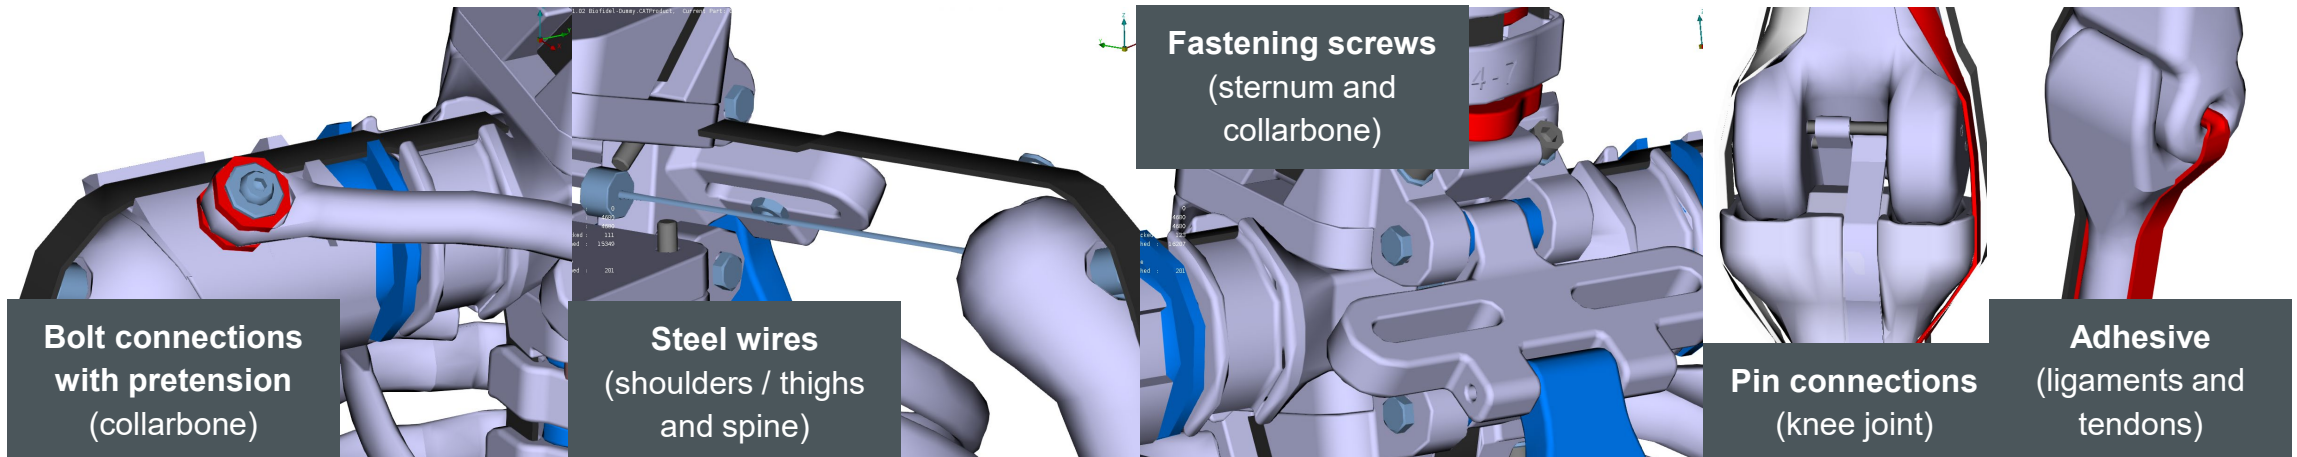

Tradeoff between injury appropriate and resource appropriate meshing!

Connections

- Realization of the kinematic degrees of freedom

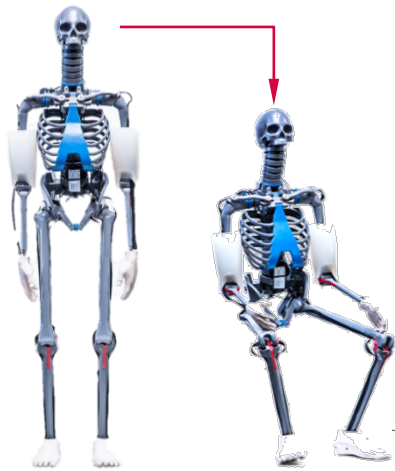

The kinematic realization of the connection shouldn't change the damage behavior of the joint region!

MODELING OF THE PRIMUS BREAKABLE[®] POSITIONING & SENSOR SIMULATION

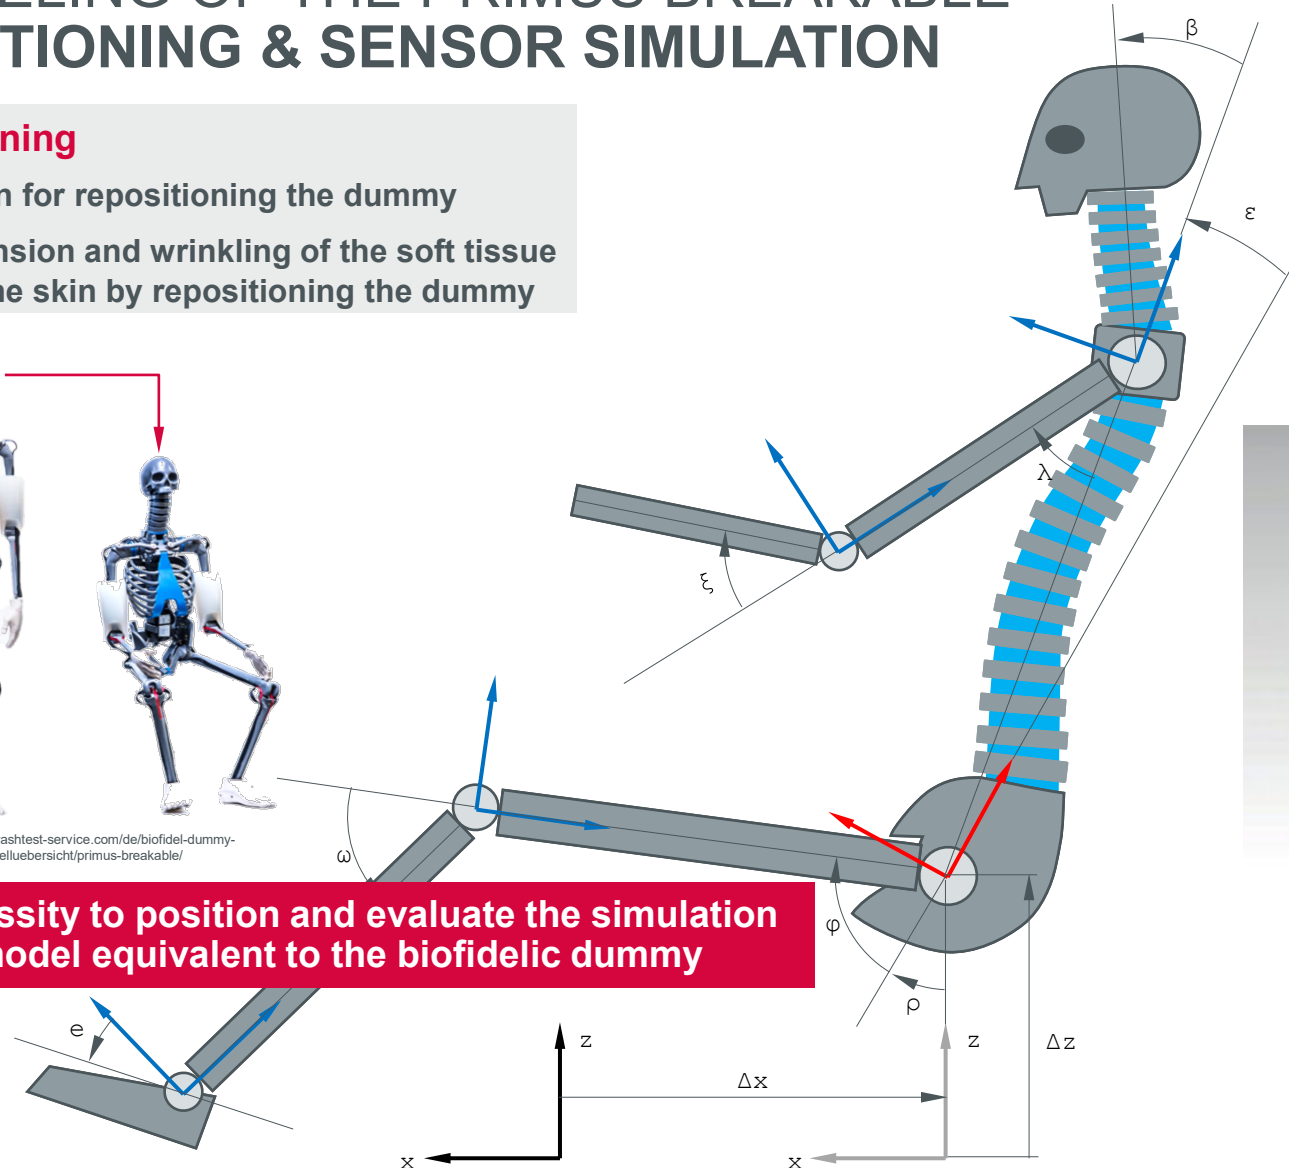

Positioning

- Option for repositioning the dummy
- Pretension and wrinkling of the soft tissue and the skin by repositioning the dummy

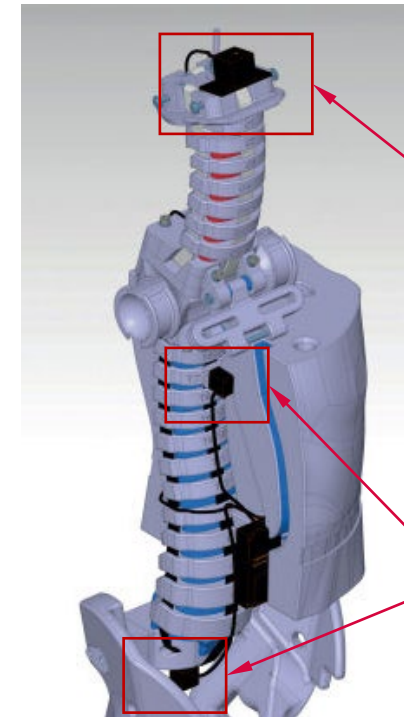

<https://www.crash-test-service.com/de/biofidel-dummy-modelluebersicht/primus-breakable/>

Necessity to position and evaluate the simulation model equivalent to the biofidelic dummy

Output / Sensoring

- Representation of the measurement technology for the evaluation of acceleration induced injuries.

https://www.evonline.org/index.php/publikationen?lang=de&option=com_content&view=article&id=3021

Kistler DTI-M60-3K

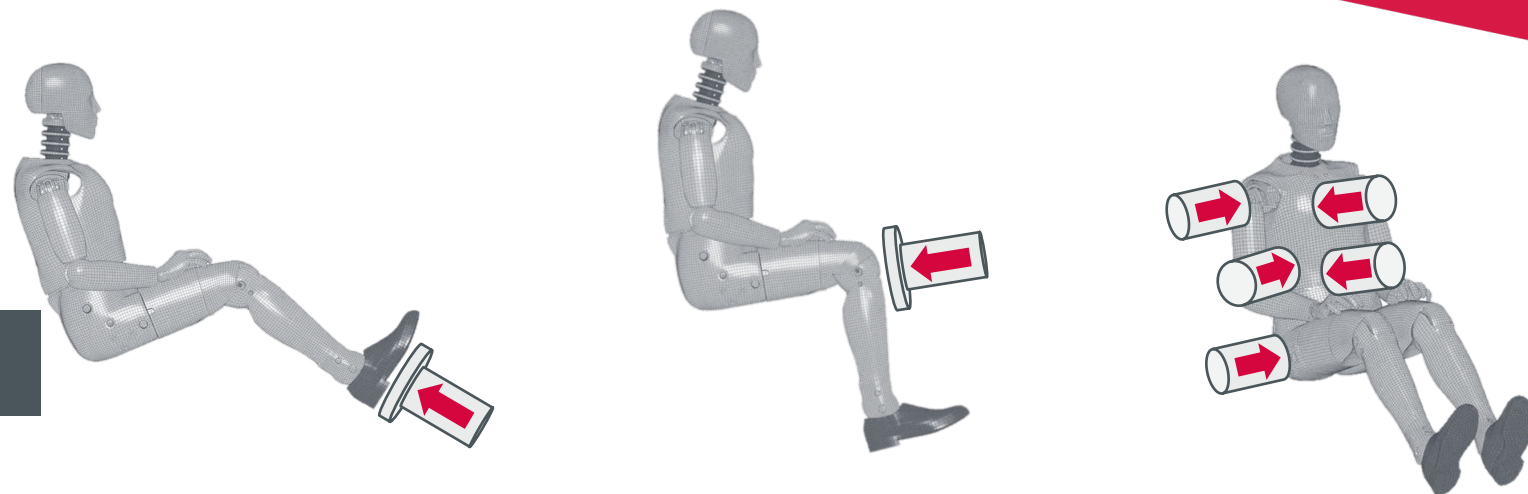

<https://www.kistler.com/de/produkt/type-dti-m60-3k/>

MODELING OF THE PRIMUS BREAKABLE[®] SIMULATION MODEL VALIDATION

Movement validation

- Testing the kinetic movement and validation of the biofidelic dummy by pendulum tests

Impact mass: 1.63kg – 64.0kg
Impact velocity: 4.4 m/s – 14.3 m/s

Use of as many different validation options as possible

Damage validation

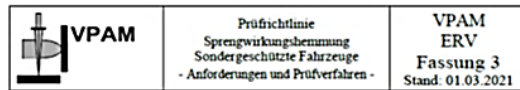

- Testing the damage behavior of the biofidelic dummy by ballistic and blast tests

Impact mass: 0.1kg – 5.0kg
Impact velocity: 30.0 m/s – 300.0 m/s

**Which injuries are representable?
Are all injury mechanisms of a vehicle blast event representable?**

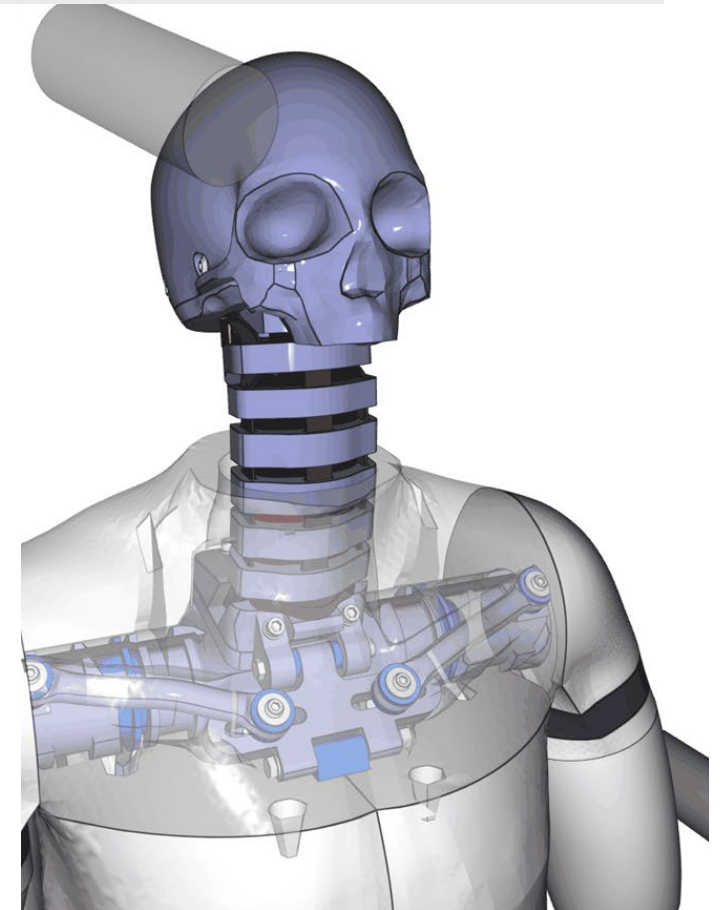

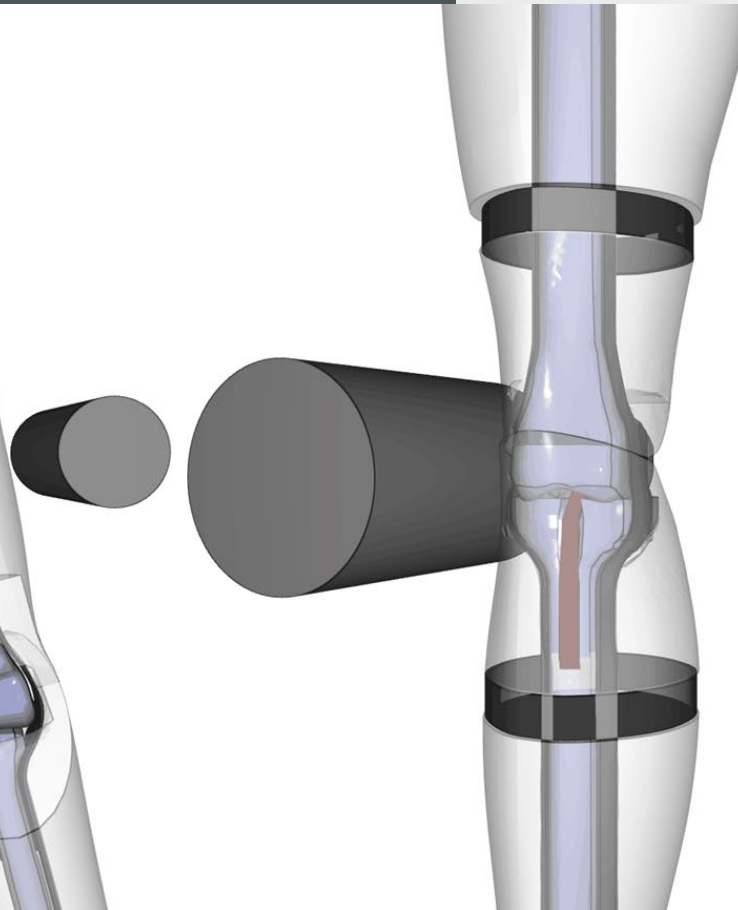

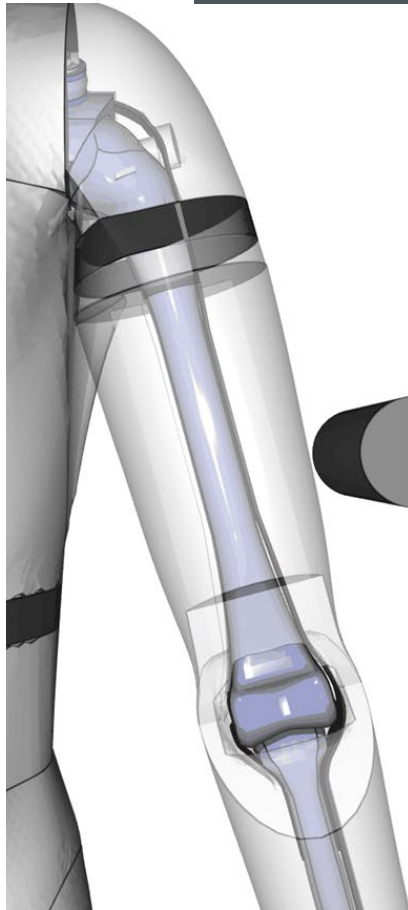

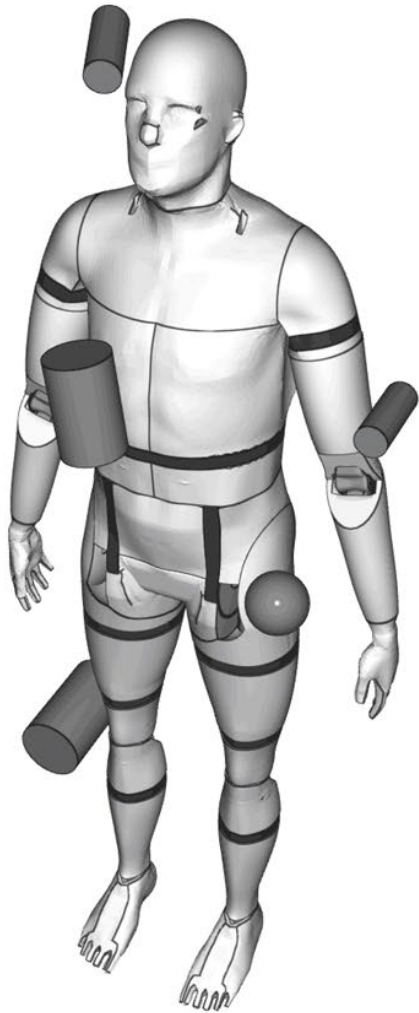

**Humanetics Hybrid III®
with measuring approach**

PRIMUS BREAKABLE® BRUTE FORCE BEHAVIOR / TEST LOAD CASE

Visualization of the dummy
behavior under different load
directions

Brute force

- Fractures in dependency of energy transfer
- Torn ligaments (knee joint)

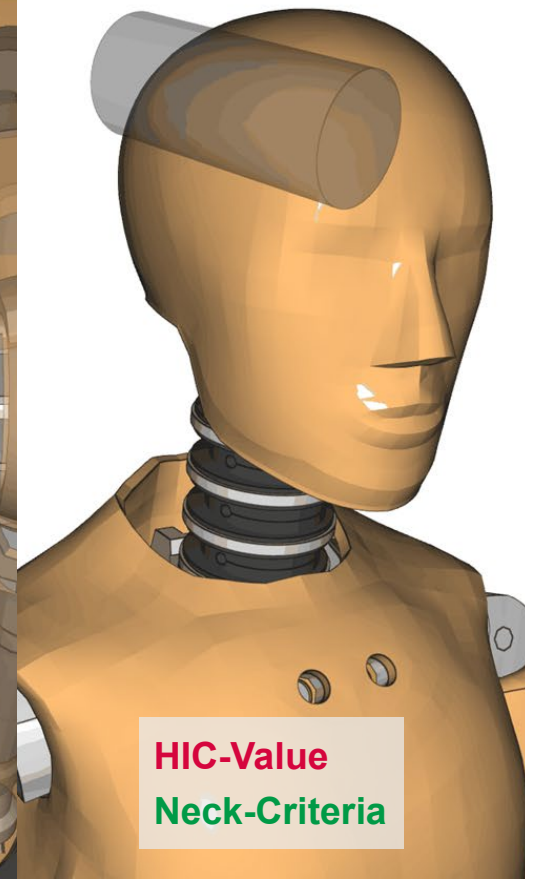

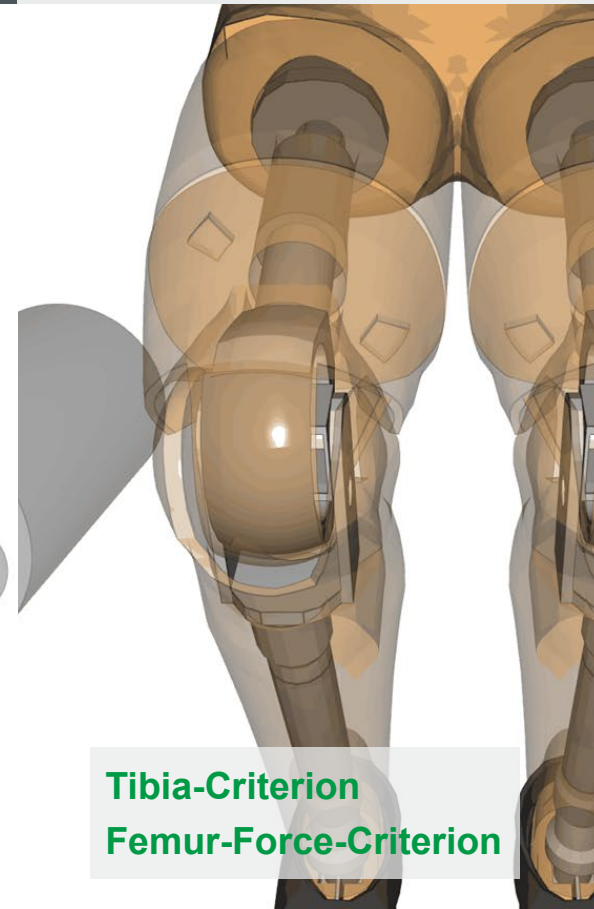

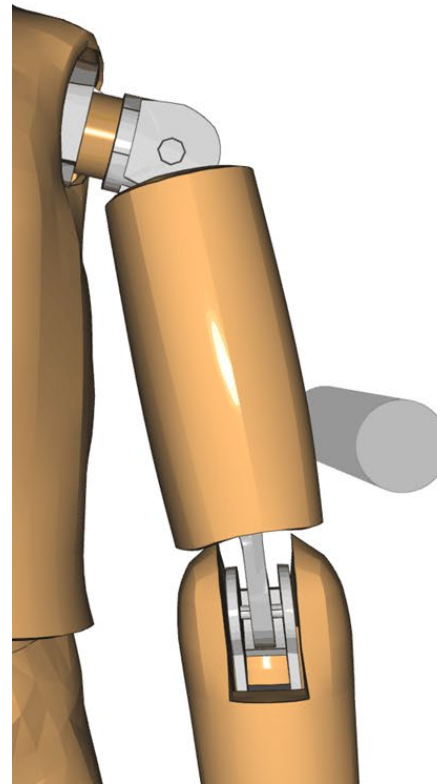

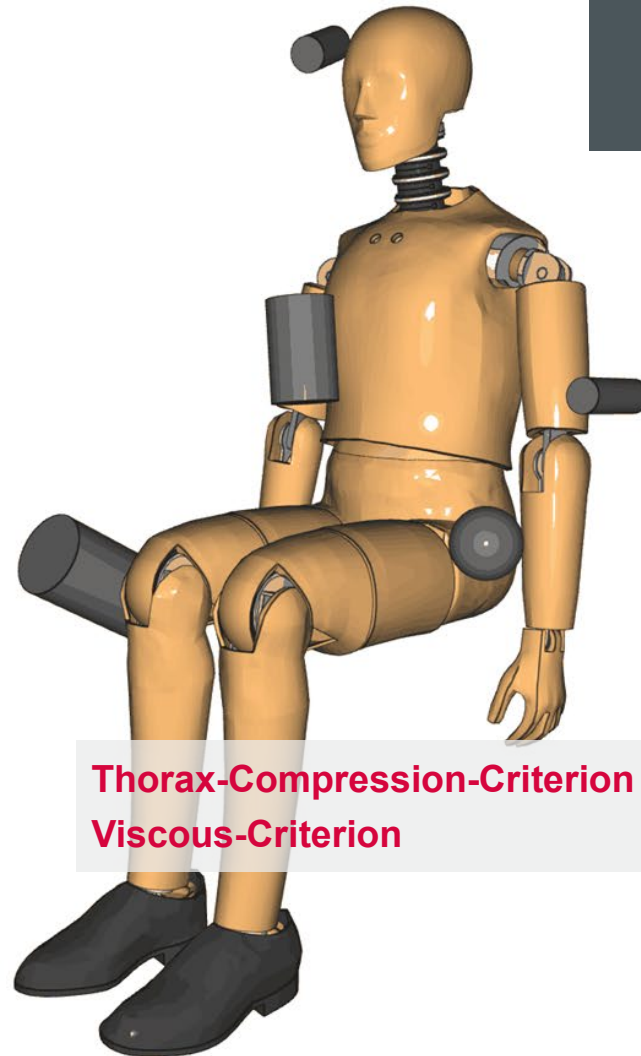

HYBRID III® BRUTE FORCE BEHAVIOR / TEST LOAD CASE

Visualization of the dummy
behavior under different load
directions

Brute force

- Often no damage indication caused by wrong loading direction
- Most of the built-in measuring devices are not triggered

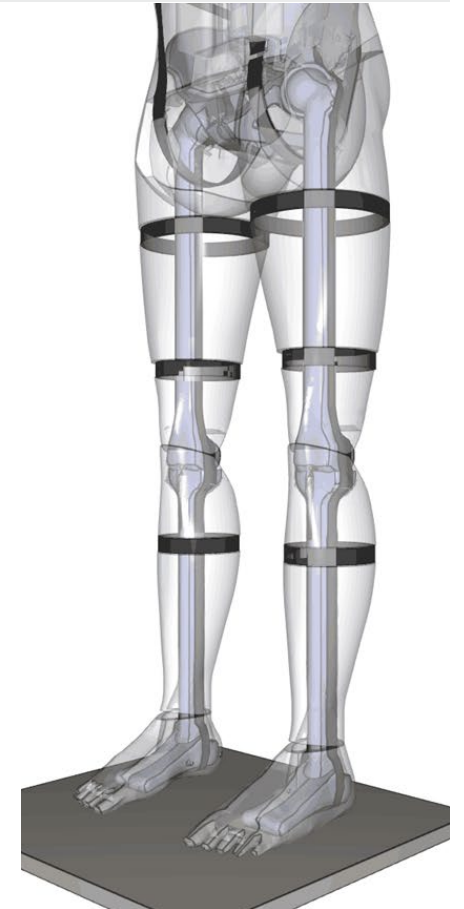

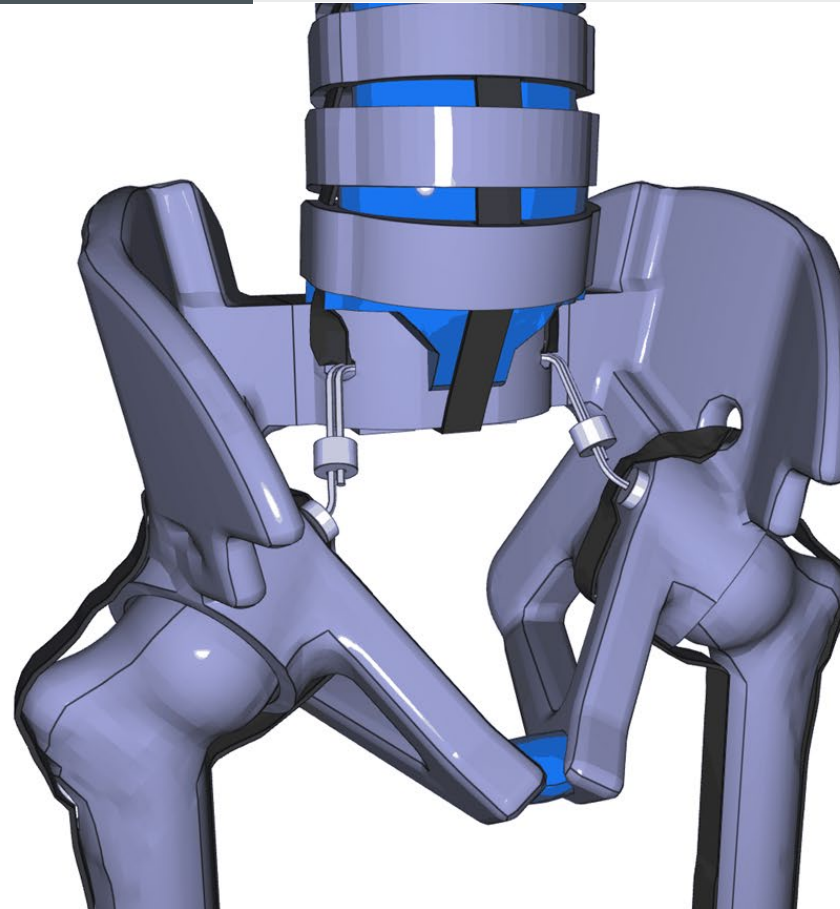

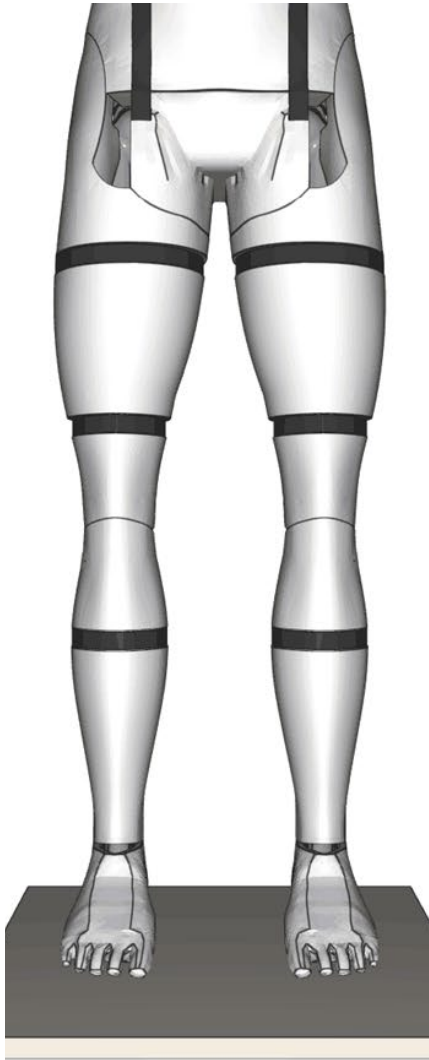

PRIMUS BREAKABLE® VERTICAL LOADING CONDITION

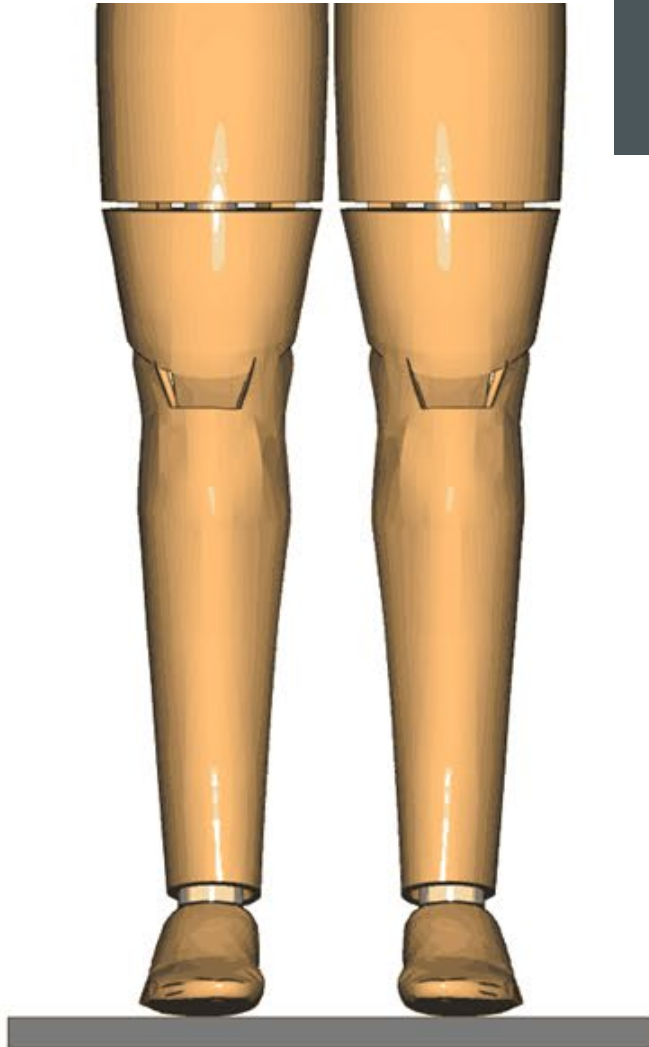

Reaction to a vertical loading
condition from a mine explosion
for example

Vertical loading condition

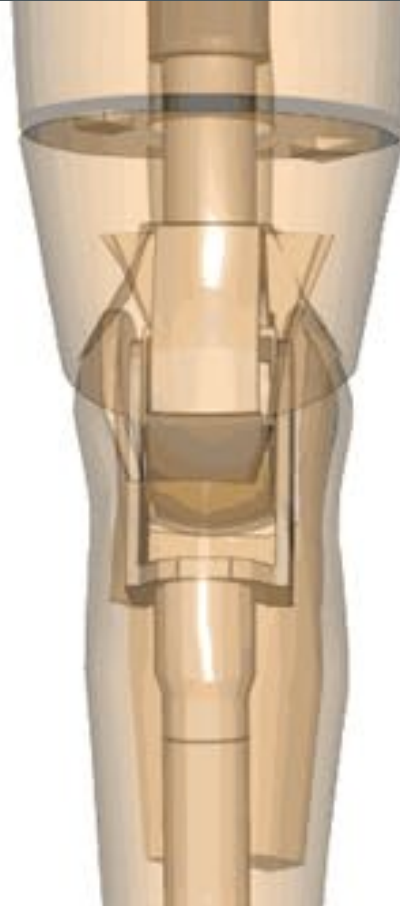

- Splintering fractures (ankle, knee joint and femur neck)
- Soft tissue damage

HYBRID III® VERTICAL LOADING CONDITION

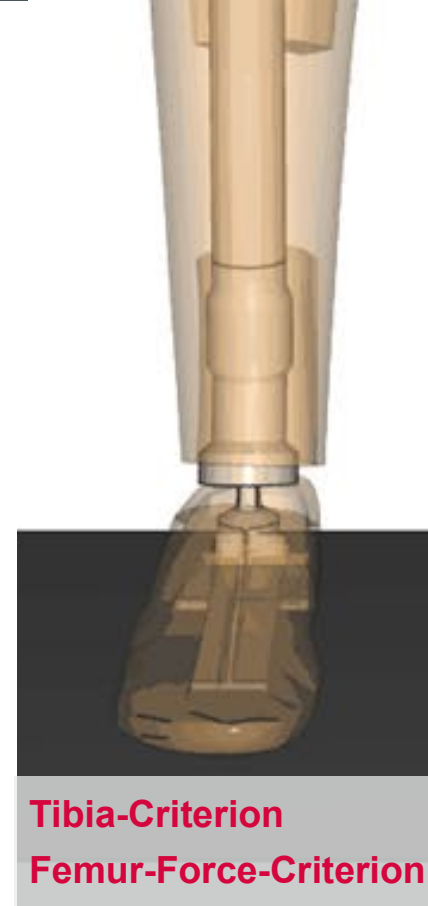

Reaction to a vertical loading condition from a mine explosion for example

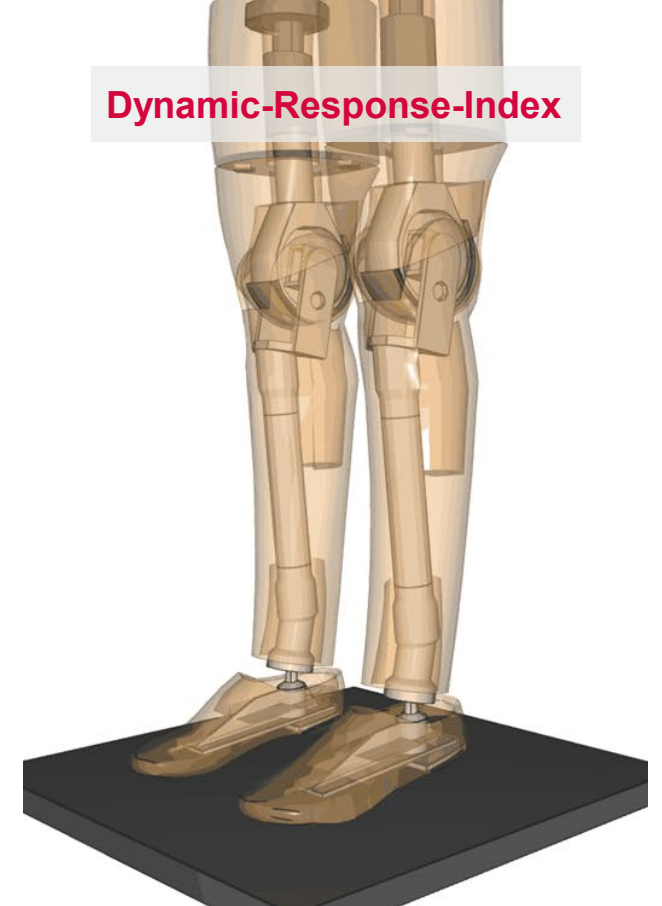

Vertical loading condition

- Meaningful measured values, caused by the intended loading direction
- Massively exceeding the permissible limit values

Tibia-Criterion
Femur-Force-Criterion

Dynamic-Response-Index

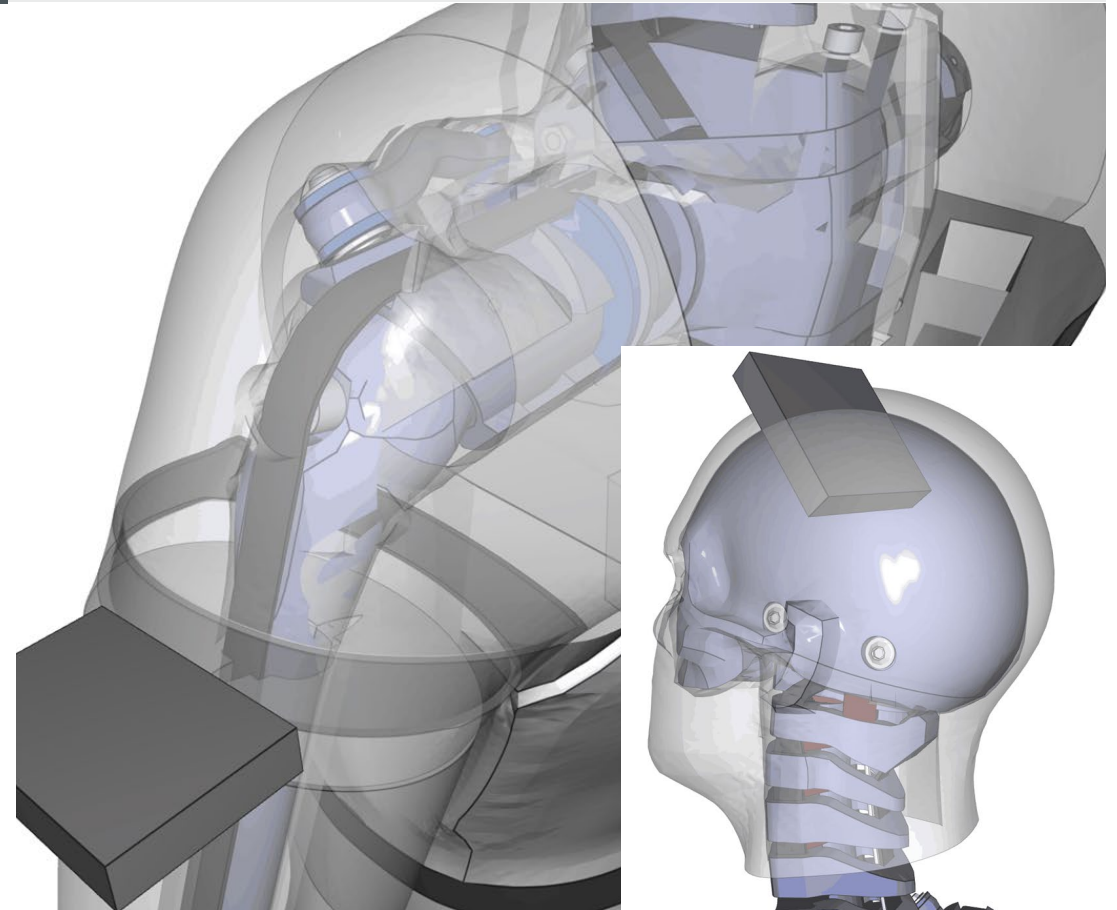

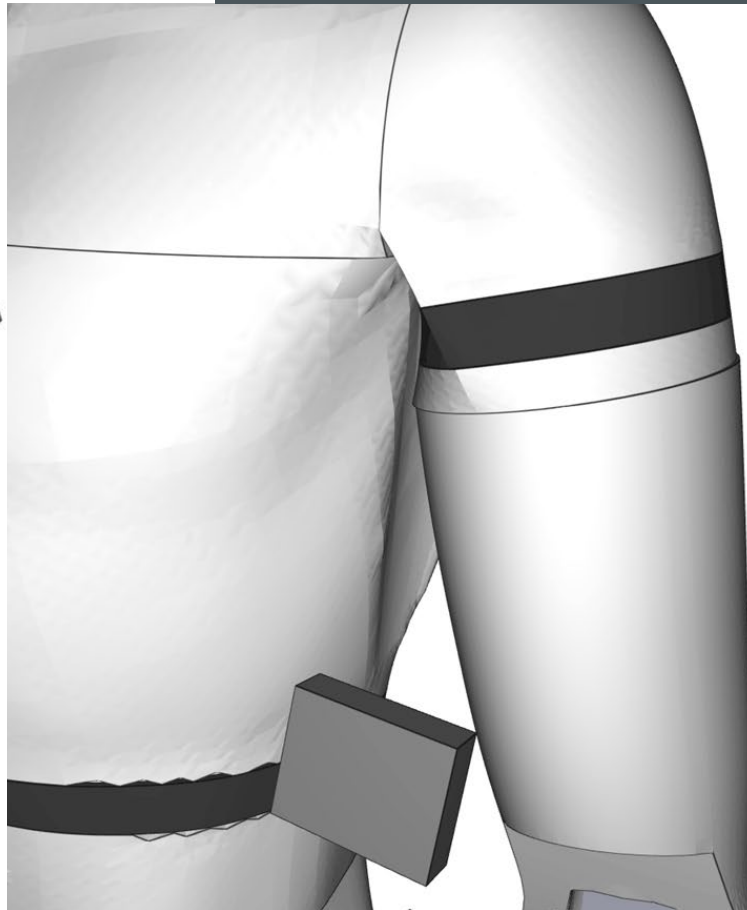

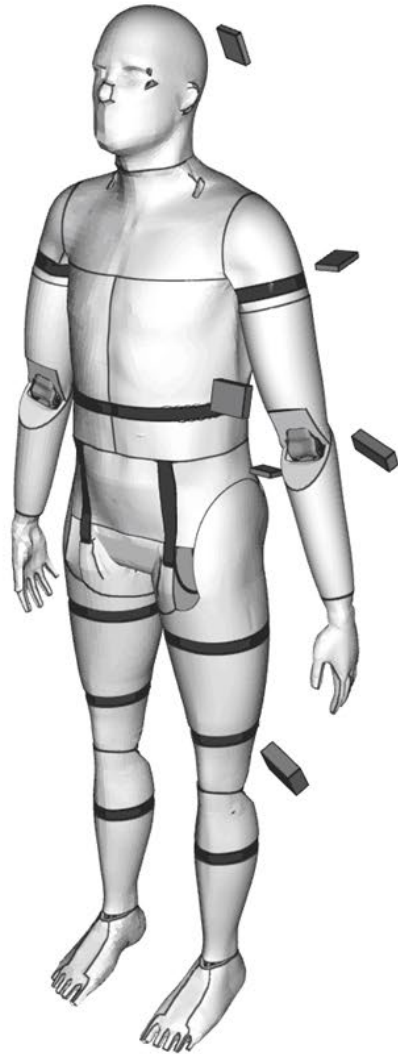

PRIMUS BREAKABLE® SECONDARY PROJECTILE IMPACT

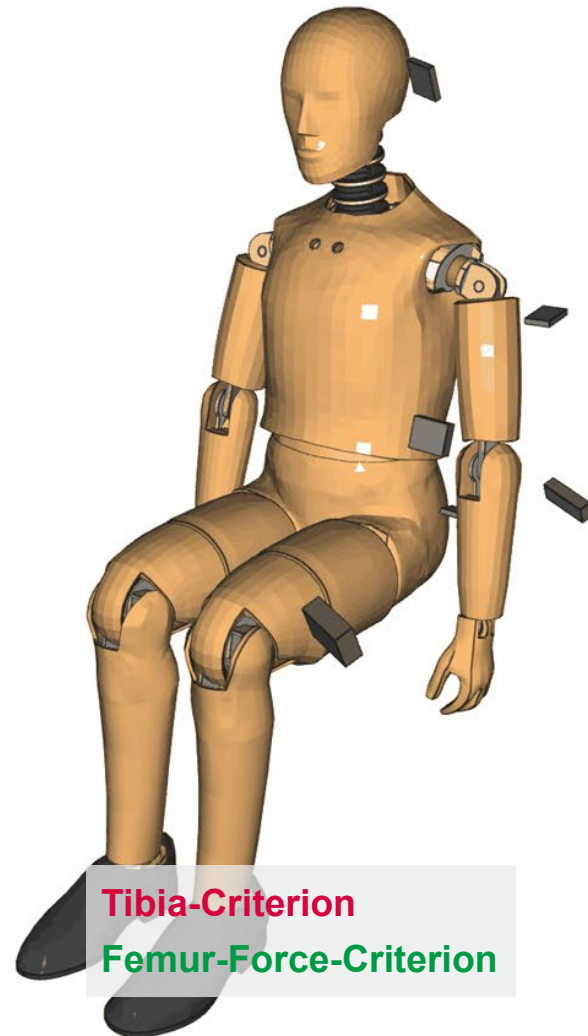

Impact of secondary projectiles
after an IED side blast to a vehicle

Secondary projectiles

- Fractures in dependency of energy transfer (Head)
- Large soft tissue damage

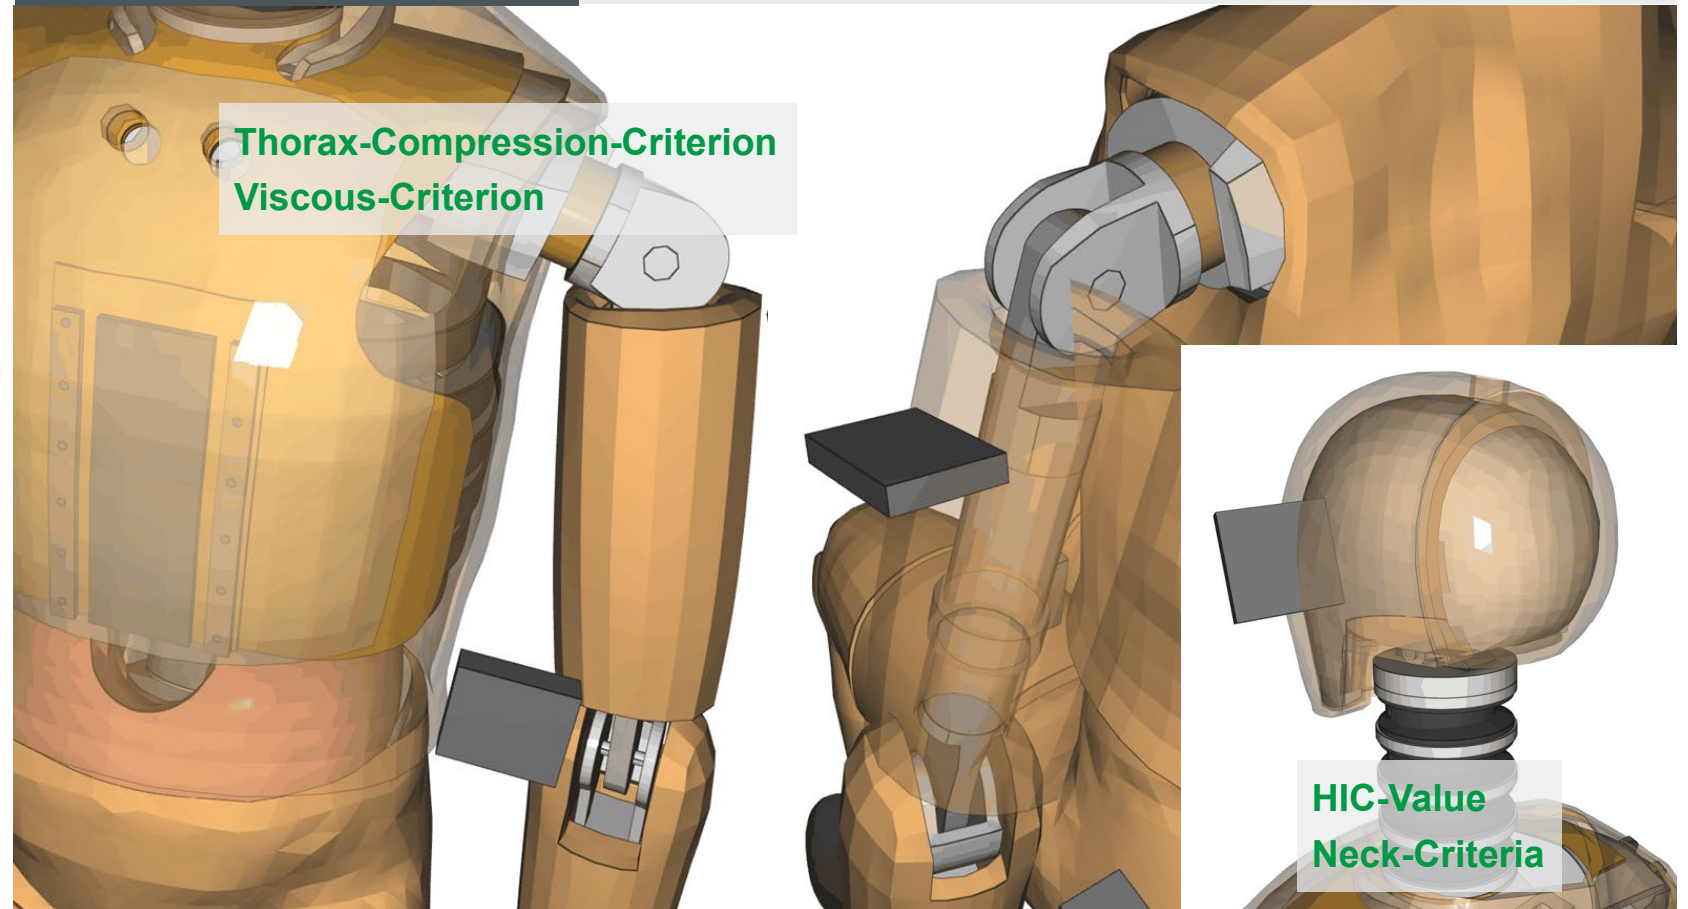

HYBRID III® SECONDARY PROJECTILE IMPACT

Impact of secondary projectiles
after an IED side blast to a vehicle

Secondary projectiles

- Either no damage indication or massive damage and reparation cost
- Most of the built-in measuring devices are not triggered

FORENSIC RESEARCH ACCIDENT RECONSTRUCTION

Unfall mit Panzerfaust

Soldat bei Schießübung getötet

Bei einer Schießübung der Bundeswehr ist in Bayern ein Berufssoldat ums Leben gekommen. Der 29-Jährige stand hinter einer Panzerfaust, als ein Kollege den Abzug betätigte.

Paderborner gerät in den Rückstrahl einer Panzerfaust – Unfallhergang rekonstruiert

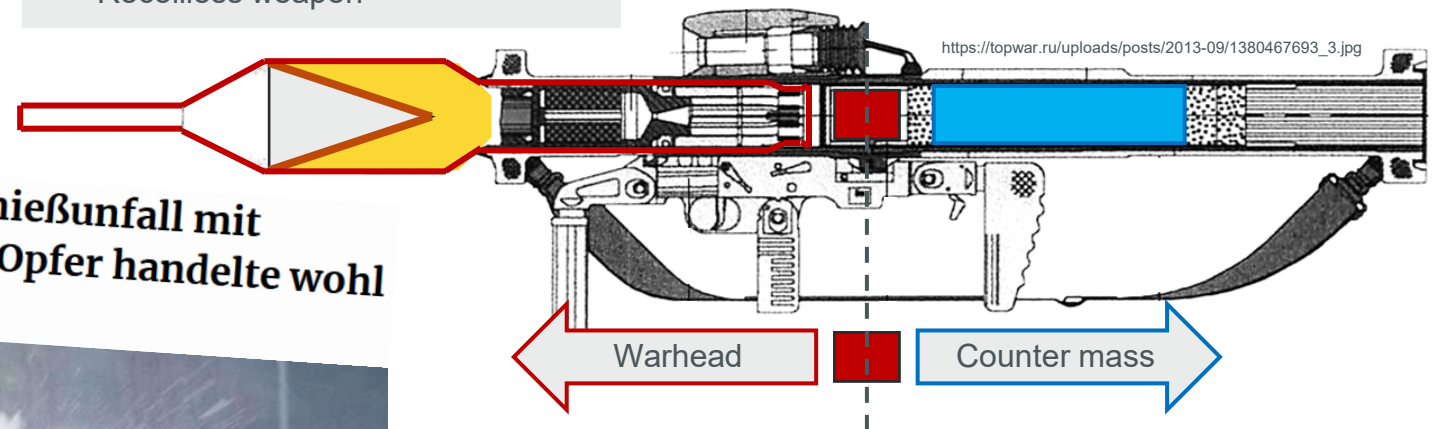

Soldat stirbt bei Schießübung mit Panzerfaust:
Verfahren eingestellt

Panzerfaust 3 (PzFst 3)

- Rocket-propelled grenade RPG
- Recoilless weapon

Dynamit Nobel

Date: May 16th 2017

- Proving ground Wildflecken
- Combat shooting test with PzFst 3
- One soldier got killed by accident
- Possibly struck by the counter mass of the RPG

What exactly happened?

How to proof / disproof upcoming theories?

Who's fault is it and is it even somebodies fault?

FORENSIC RESEARCH ACCIDENT RECONSTRUCTION

PzFst 3 accident reconstruction at the WTD 91

- Massive destruction of thorax and torso with and without ballistic protective vest
- Comparable damage and displacement on the biofidelic Primus Breakable® dummy

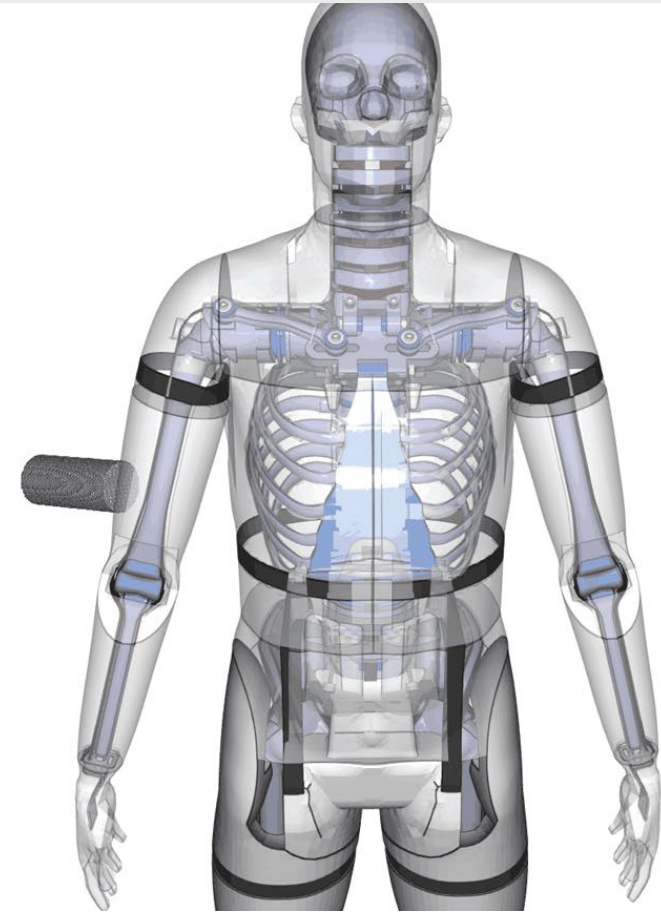

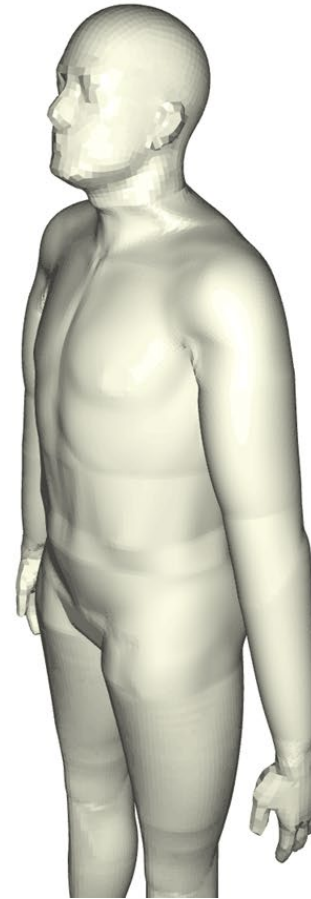

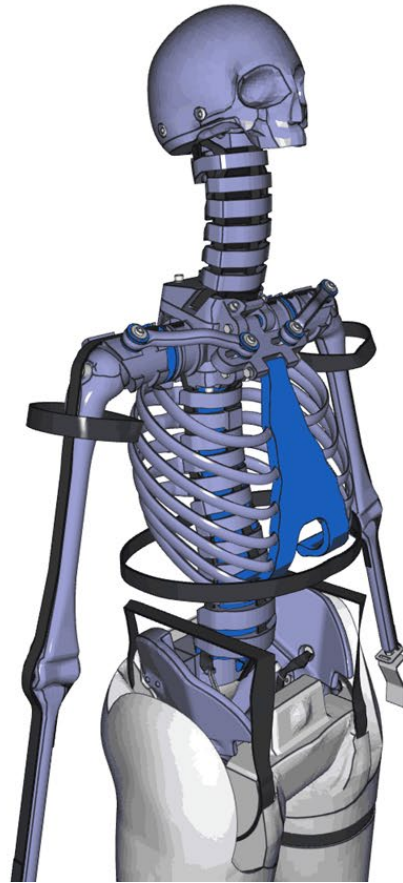

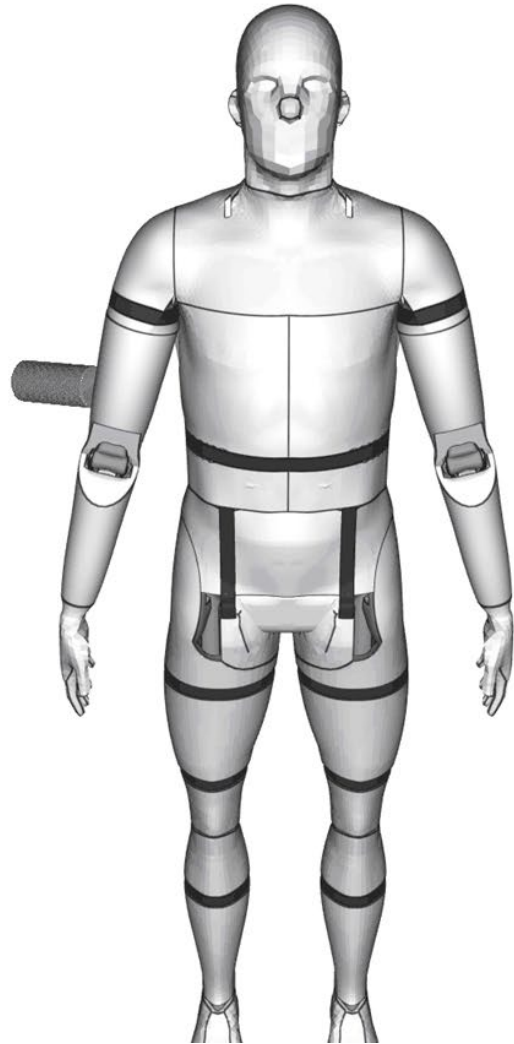

PRIMUS BREAKABLE® FORENSIC RESEARCH ACCIDENT RECONSTRUCTION

Forensic research and accident reconstruction

PzFst 3 accident reconstruction

- Massive destruction of the torso with no chance of survival
- Huge impulse transfer to the body

HYBRID III® FORENSIC RESEARCH ACCIDENT RECONSTRUCTION

Forensic research and accident
reconstruction

PzFst 3 accident reconstruction

- Massive destruction, but no indication by the measuring devices
- Destruction is comparable to the reality (loss of the Dummy)

Thorax-Compression-Criterion
Viscous-Criterion

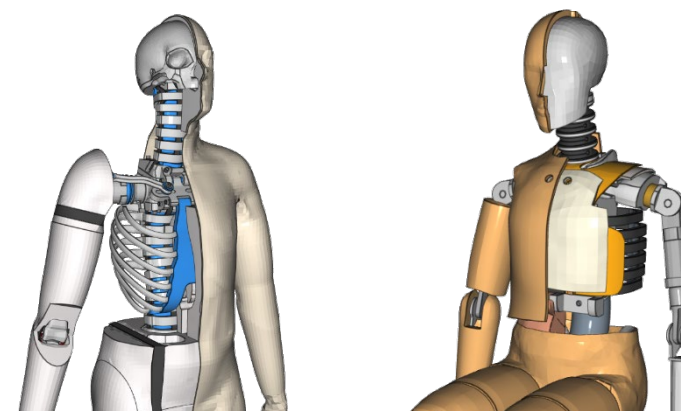

HIC-Value
Neck-Axial-Compression

Dynamic-Response-Index

CONCLUSION

PRIMUS BREAKABLE® & HYBRID III®

- The **PRIMUS Breakable®** offers a continuous evaluation spectrum (direction independent damage) → **Developed for accident research**
- The **Hybrid III®** offers discrete evaluation criteria (directional measured values) → **Developed for front crash applications**

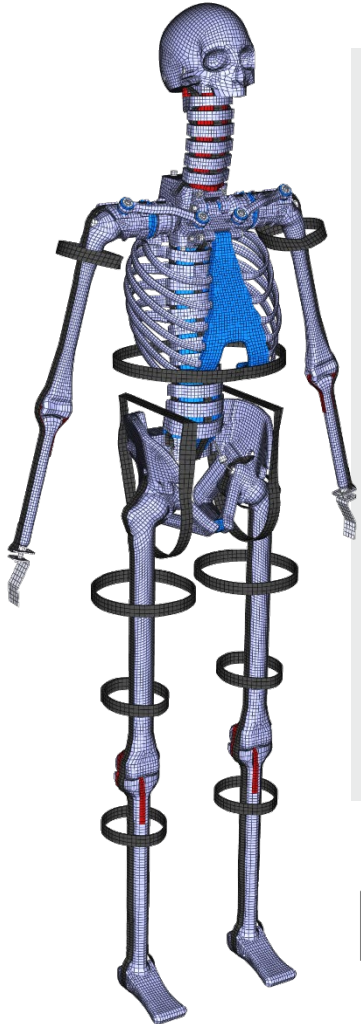

Loading condition / Injury mechanism	Primus Breakable®	Hybrid III®
Secondary explosive injury mechanism (Fragments)	Yes	Conditional, dummy loss / repair
Tertiary explosive injury mechanism (Accelerations)	Yes, advantage due to kinematics	Yes, loading ~ measuring direction
Undefined loading conditions (Accident reconstruction)	Yes	Conditional, dummy loss / repair

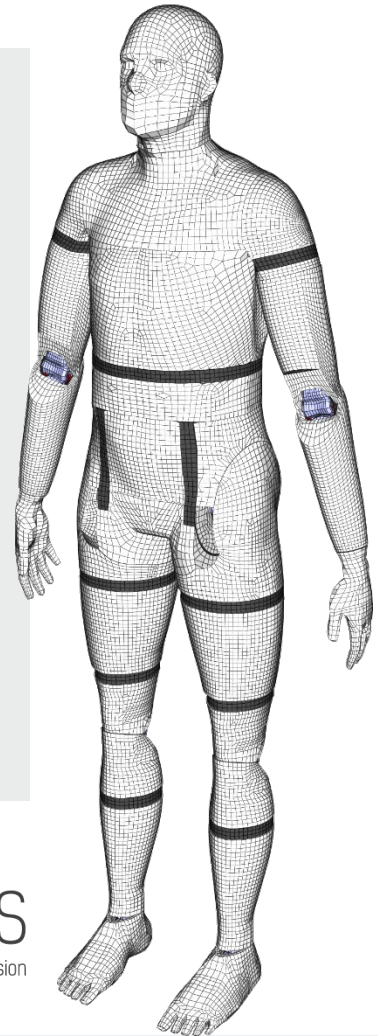

- In previous trials on protected vehicles the **PRIMUS Breakable®** showed very meaningful results → Part of the **VPAM ERV Ed. 3**
- Design and evaluation of the **PRIMUS Breakable®** and the **Hybrid III®** follows totally different approaches → Trade-off regarding **cost, risk** and **required level of detail**

CONCLUSION

THE PRIMUS BREAKABLE® MODEL IN IMPETUS®

- The **PRIMUS Breakable®** model building process for **IMPETUS®** is completed (meshing, materials, connections, contacts, etc.)
- The realistic kinematics of the **PRIMUS Breakable®** are given on the **IMPETUS®** model as well and the positioning simulation of the model is currently being worked on
- In previous simulations we achieved to re-enact different types of fractures, torn ligaments and soft-tissue penetrations with the simulation model of the **PRIMUS Breakable®**
- The today's model size in **IMPETUS®** is ~ 20GB, therefore the numerical performance has to be further improved.
- The **PRIMUS Breakable®** model is in validation phase at the moment to get it ready for the **IMPETUS® Market** as soon as possible
- The **IMPETUS®** model of the **PRIMUS Breakable®** is already of exceptional quality and we are very proud to have been part of this project
